

MALEM[®]

ENURESIS ALARMS

Malem[®] Wireless Alarm + Record Wetness Sensor and Toilet Trainer

Ideal for use in Care or Nursing Homes and for children with learning difficulties.

It can be used day or night in two ways:

- 1: Simply to indicate urination so that the child/patient is changed. This releases the nursing staff from regular and frequent manual checking and can avoid the complications associated with child/patient remaining wet until discovered.
- 2: To develop a toileting regime; by tabulating the child/patient urination times, a bladder activity pattern can be observed and the need for a bed-pan or toilet anticipated. This can result in significant reduction in Management and Disposable Nappy costs, as well as an improvement in child/patient morale.

The wetness Sensor consists of a small Transmitter (Tx) and a portable Receiver (Rx). The Tx can be attached to the Easy-Clip[®] Sensor supplied. Optional extras include the Standard sensor or Bed-Mat. The Tx detects urination or wetness which will then activate the Rx Receiver. The receiver will emit a choice of alarm sounds, a recorded message, user's name (useful for identifying an individual user) or a choice of music, this indicates urination or wetness. A silent vibrating option is also available.

Up to 16 Tx/Rx units can be used in the same location and more than one Rx for each Tx.

Receiver Rx

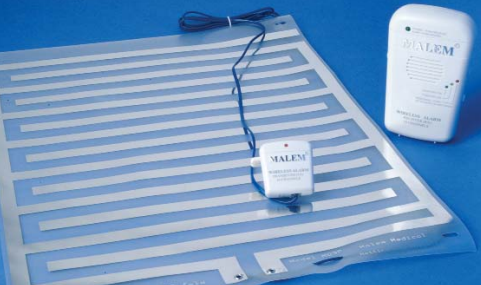

Transmitter Tx

- Record user name for easy identification when wet.
- Record your own sounds, music or personal message.
- A choice of pre-recorded music, single sounds or eight sounds.
- Volume control with minimum limit.
